Since the publication of the first edition of this book, the field of analog integrated circuits has developed and matured. The initial groundwork was laid in bipolar technology, followed by a rapid evolution of MOS analog integrated circuits. Thirty years ago, CMOS technologies were fast enough to support applications only at audio frequencies.

The circuit below shows a cascade of first-order uncompensated Common-source amplifiers. It can be estimated that the time constant of the cascade stage is approximately equal to 3 times the time constant of a single stage, usually must faster than an OpAmp. So, to design high speed comparators, one should make  $V_{eff}$  of each stage large.
