This book is different than many Arduino books in that it expects no previous knowledge in electronics or programming. Instead of going into depth teaching those topics, it teaches only enough so that you can make things.

So, I get two or three emails a day, all basically asking the same thing: "Where can I learn about electronics?" In general, most of these people have seen some of my projects and want to be able to build similar things.

This uses the same ATmega328 as late-model Duemilanove, but whereas the Duemilanove used an FTDI chip for USB, the Uno uses an ATmega16U2 (ATmega8U2 before rev3) programmed as a serial converter.:

Mobility I'm happy with the compactness of the battery power pack. Housing 85Ah at 12VDC for 1KWh of power, a 2000W power inverter, a charge controller, a voltage meter, an LED light bar, multiple outlets with circuit breakers, as well as all cables in such a small space is extremely convenient for portability.

Hello Lars, First of all I would like to congratulate you for this amazing project. I'm from Brazil, student of Computer engineering, and I'm very interested in your project because I'm developing a conclusion work for my degree about a prothesis to inferior members with some colleagues where we're planning to use arduino as you did.

In this instructable I will bring you along on my journey of learning how to add RC control using an Arduino microcontroller. Unlike other Instructables or blogs, I will include all the information I can even if it isn't directly related to the project.

Here is the schematic of the whole setup and below is the Arduino sketch. Please note that the resistors needed to be at least 1/4W rated but I did not have the 22 Ohm needed for the project and used 1/8W ones.

I do not like the end-contacts that close to reporting limits. Indeed, if a wire disconnects, cut or is broken: bye-bye safety! The best protection is achieved by linking the two switches "normally closed" which cause the stop opening the circuit.
