Communication Shyness Reticence and Communication Apprehension edited by J A from BSAD 220 at SUNY Canton

Communication Shyness Reticence and Communication Apprehen

approach or avoid communication (reticence, unwillingness to communicate, willingness to communicate). The concept of "shyness" is commonly employed in the field of psychology.

Reliability and Validity of I Willingness to Communicate Scale

Shyness and reticence affect the social skills necessary for children to make friends. Shy students tend to confine their career aspirations to vocations that require little oral communication. They seem to have a higher need to avoid failure, and they have less achievement or success motivation than other students.

Communication Apprehension | Shyness | Anxiety

Communication apprehension (CA) is associated with fear of anticipated communication. Yet, imagined interactions (IIs) can help reduce fear of communication in which individuals use mental imagery before and after to prepare and review communication.

Communication Apprehension and Imagined Interactions

Abstract. Communication apprehension (CA) is a broadly based anxiety related to oral communication (McCroskey, 1970). More specifically, CA is "an individual's level of fear or anxiety associated with either real or anticipated communication with another person or persons" (McCroskey, 1982b; 1984).

CA and shyness as we employ these constructs. Shyness is the predisposition to withdraw from or avoid communication with other people. Hence, CA is a subjective, affective experience whereas shyness is a behavioral tendency that may result from CA or other causes. The distinction we draw is similar to that
