The ability to control electronic properties of a material by externally applied voltage is at the heart of modern electronics. In many cases, it is the electric field effect that allows one to vary the carrier concentration in a

semiconductor device and, consequently, change an electric current through it.

The magnetic field strengths are the total magnetic field strengths in nanoteslas. The angle shown in parenthesis is angle of the magnetic field downward direction. The influence of the downward tilt on the fast E1 pulse is quite complicated, but when there is less downward tilt, the intensity of the EMP tends to be more symmetrical around the detonation point.
