Description. Fundamentals of Manufacturing Third Edition provides a structured review of the fundamentals of manufacturing for individuals planning to take the Certified Manufacturing Technologist (CMfgT) or Certified Manufacturing Engineer (CMfgE) certification exams. This book has been updated according to the most recent Body of Knowledge published by the Certification Oversight and Appeals ...

Electrospinning is a fiber production method which uses electric force to draw charged threads of polymer solutions or polymer melts up to fiber diameters in the order of some hundred nanometers. Electrospinning shares characteristics of both electrospraying and conventional solution dry spinning of fibers. The process does not require the use of coagulation chemistry or high temperatures to ...

Molecular weaving of covalent organic frameworks, where threads of strongly bonded organic molecules are interlaced at regular intervals, allows collective large-amplitude movements of these threads and can thus adapt to variously-shaped incoming guests, giving rise to "adaptive inclusion", a new scenario of dynamics in solids.

Atomic layer deposition (ALD) is a vapor phase technique capable of producing thin films of a variety of materials. Based on sequential, self-limiting reactions, ALD offers exceptional conformality on high-aspect ratio structures, thickness control at the Angstrom level, and tunable film composition.

Dr. Dmitri Kopeliovich Electrode potential is a fundamental conception of electrochemistry and corrosion theory. It helps to predict the direction and intensity of an electrochemical process (eg. corrosion) and allows to control it.

Climate change is now a major concern. The polar ice caps are reported to be melting and sea levels are rising due to an increase in the average temperature of the Earth's atmosphere and oceans .Global warming is driven by increasing levels of tropospheric gases that contribute to the so-called greenhouse effect.
