Green chemistry, also called sustainable chemistry, is an area of chemistry and chemical engineering focused on the designing of products and processes that minimize the use and generation of hazardous substances. Whereas environmental chemistry focuses on the effects of polluting chemicals on nature, green chemistry focuses on the environmental impact of chemistry, including technological ...

Inorganic Chemistry (ACS Publications)

Drug design, often referred to as rational drug design or simply rational design, is the inventive process of finding new medications based on the knowledge of a biological target. The drug is most commonly an organic small molecule that activates or inhibits the function of a biomolecule such as a protein, which in turn results in a therapeutic benefit to the patient.

From the 12 Principles of Green Chemistry
It is better to prevent waste than to treat it or clean it up after it is formed
in many cases, solvent input equals solvent to be treated and managed
Synthetic methods should be designed to maximize the incorporation of all materials used in the process
