and purification of peptides [3]. For purification of peptides, it is often difficult to use methods similar to those applied in the purification of other organic compounds, mainly due to their complexity. Purification of organic molecules often uses methods based on crystallization to isolate the desired molecule.

In Figure 2, two peptides are shown to be well resolved although differing by only a single amino acid, serine versus threonine. It is this high resolution capability that is the foundation for the widespread use of reversed-phase HPLC for the separation of proteins and peptides. Figure 2. Separation of closely related peptides by RP-HPLC.

Peptides play important roles in the physiology of organisms. Pure peptides are required to effectively study biochemical interactions in organisms as well as to understand structure-activity relationships in the

development of peptide therapeutics. Many types of impurities complicate the isolation and purification of peptides.

for peptide synthesis and purification. Instruments Biotage is the only manufacturer of traditional, room temperature peptide synthesizers as well as microwave peptide synthesizers in both entry level and high throughput configurations. We offer a range of manual, semi-automated and automated systems depending on your peptide synthesis needs.
